

Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').

=>

Device Type	Category	Real-Life Use Case
Inkjet Printer	Printer	Printing college assignments and color documents.
Laser Printer	Printer	Printing large volumes of office documents quickly.
Dot Matrix Printer	Printer	Printing invoices and receipts in businesses.
Flatbed Scanner	Scanner	Scanning photos and important documents.
Sheet-fed Scanner	Scanner	Digitizing multiple pages of paperwork in offices.
USB Webcam	Webcam	Attending online classes and video meetings.
Wireless Webcam	Webcam	Video conferencing and live streaming without cables.

2. Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

=> 1. USB Connection

Interface Used: USB

Purpose: Direct wired connection for printing documents.

2. Wi-Fi Connection

Interface Used: Wi-Fi

Purpose: Wireless printing from anywhere within the network range.

3. Bluetooth Connection

Interface Used: Bluetooth

Purpose: Short-range wireless printing without needing a router.

3. List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.
Hint: Think about speed, convenience, and compatibility.

=>

Connection Interface	Advantage	Disadvantage
USB	Fast and reliable data transfer.	Requires a cable connection.
Wi-Fi	Allows wireless connection from multiple devices.	Depends on network strength and stability.
Bluetooth	Easy wireless setup without cables.	Limited range and slower speed than USB.

4. Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

=>

Connecting a USB Webcam to a Computer

1. Plug in the Webcam

Connect the webcam to an available USB port on your computer using the USB cable.

2. **Wait for Detection**

The operating system will usually detect the webcam automatically and install the required drivers.

3. **Install Drivers (if needed)**

If the webcam came with software or drivers, install them from the provided CD or the manufacturer's website.

4. **Check Device Recognition**

Open Device Manager (Windows) or System Settings to confirm that the webcam is detected.

5. **Test the Webcam**

Open the Camera app or a video conferencing application such as Zoom or Google Meet to test the video.

6. **Adjust Settings**

Configure camera resolution, brightness, and microphone settings if necessary.
